

Innovative Software Developer

Are you a fast learner with a passion for new technology, intelligent systems and automation? Optimax provides energy trading and consulting services for specific clients like public electricity suppliers. We are expanding our business to South-East Europe and are looking for highly-skilled graduates who are passionate about developing intelligent software to support our trading team.

ESSENTIAL DUTIES AND RESPONSIBILITIES:

- Development of new intelligent applications, modify and maintain existing software
- Documentation of new applications and software, or the changes made to existing applications
- Integration of different software systems and development of (communication) interfaces
- Organize and process Big Data including optimization of data quality

REQUIREMENTS:

- Studies in computer science/computer engineering (Master, PhD)
- Strong programming skills in Java, C++, Python or C#
- Passion for new technologies, artificial intelligence and automation
- Experience in data base management, relational databases (SQL, MS-SQL, etc.), NoSQL Technologies and expertise in Big Data technologies preferred
- Strong analytic and problem solving skills
- Ability to manage time and prioritise tasks
- Fluent in English. Other European languages are an advantage, German skills are not mandatory

WHAT WE OFFER:

- Opportunity to become part in a dedicated and highly-skilled team of professionals
- You will gain full ownership into the projects. You will be involved in the full development cycle
- Market based remuneration
- Possible part-time position and flexible working hours
- Chance to get a permanent job

Sounds good?
